

Cera-Mix STANDARD

- Mixing ratio: 0.5 L of water to 1 kg STANDARD.
- Can be worked for approx. 18 min.
- Hardens after approx. 25 min.
- Surface Hardness: over 18 N/mm².

Used for: casts, sculptures, modelling and model railways.

Cera-Mix STANDARD is especially suitable for modelling where it is necessary to work with the model after the casting compound has hardened, eg: when making model railways, sculptures etc. Cera-Mix STANDARD sets with a porous surface that can be easily worked with modelling tools. The optimum consistency for modelling work is achieved after approx. 20 min. and the compound can then easily be worked. The mixing ratio can be varied as required.

KEEP DRY.
